

Are you drinking bottled water?

1. Do you know that by the time the bottled water reaches your mouth, it is six (6) months to one year old? It has been sitting under the sun in warehouses, storage yards and docks? If it is the expensive brand of water from a foreign country, it is often over eighteen months to two years old?
2. Do you know that Plastic bottles (#7 plastic) used in bottled water can leach a chemical called Bisphenol A (BPA) into the water, which may cause cancer and is harmful to you and your love ones? We use #2 non-leaching.
3. Do you know the source of your bottled water?
4. Do you know that the plastic bottles are clogging up our ocean and landfills?
5. Do you know that most bottled water is very acidic? Most are pH4 or lower and can make your body more acidic and more susceptible to diseases?
6. Do you know that drinking Kangen Water® (alkaline – ionized water) made fresh daily is very good for your health and is actually less expensive than bottled water?

Don't take my word for it, go to the internet and do your own research. Here are a couple of good dependable websites:

1. <http://www.ewg.org/bottled-water-2011-home> for bottle water studies.
2. www.IMKangen.com for side by side comparisons and demonstrations.
